

# The Claw

**The Claw** is a manually attaching, self-releasing claw specifically designed to grasp Playblok foam bricks.

When placed in **The Claw**, the weight of a Playblok keeps it securely attached until it's deposited on another Playblok or on the floor whereupon **The Claw** releases its grip automatically. Simple and efficient!

**The Claw's** design is intended to function with a wide range of hand-powered or electric interactive play cranes. If you are interested in knowing more about the availability of crane mechanisms, please contact us and we will be glad to discuss it with you.
